

Barton Combined Sewer Overflow (CSO) Control Project

Crews to conduct roadside rain garden flow testing on August 29

Street will be open, parking restrictions near work area

On Friday, August 29, crews will conduct rain garden flow tests on the 7500 block of 34th Avenue SW. These tests are to make sure water flows into and drains out of each rain garden as intended. The rain gardens are part of the Barton CSO Control Project to reduce overflows of stormwater and sewage into Puget Sound during heavy rains.

What you should expect:

- Flow tests to take about half a day to complete.
- Flow test equipment on the street.
- Crews will remove green protective fencing from around the rain gardens as early as mid-September.
- Ongoing maintenance by King County once work is complete.
- Regular updates to the project website at the beginning of each week with more detail about current construction activities. Visit www.kingcounty.gov and search "barton cso-gsi".
